

SCREWED BONNET NEEDLE VALVES

H-99 SERIES

FEATURES

- Blowout-Proof Stem
- MAWP* up to 10,000 psi (690 bar)
- MAWT* up to 648°C (1200°F)
- End connection size range: 1/4" to 1" or 6mm to 25mm
- Flow Coefficient (Cv) 0 to 1.5
- Variety of stem types
- Packing bolt for easy panel mounting, no packing disassembling is required

* Maximum Allowed Working Pressure, Maximum Allowed Working Temperature.

*For weld ends valves, body is made of low carbon stainless steel

GENERAL

The H-99 Series offers a general-service valve of rugged design and construction. It is available in stainless steel to suit a wide range of services.

Capable of withstanding high pressures (10,000 psig max) and high temperatures.

This valve is typically used in a severe environments, high pressure sampling systems, high pressure shut-down systems and test stands.

EASY MOUNTING PROCEDURE

1. Disassemble the handle, using an appropriate hex key. Take off the panel nut.

2. Insert the valve into the panel hole and reassemble the panel nut. Firmly tighten the nut.

3. Reassemble the handle. Firmly tighten the hex screw.

CLEANING & PACKAGING

Every H-99 series needle valve is cleaned in accordance with Standard Cleaning and Packaging (procedure 8184). Oxygen Clean & Lubricant Free Cleaning and packaging, in accordance with Special Cleaning and Packaging (procedure 8185), is available as an option.

Lubricant free cleaned valves have significantly higher actuation torque.

TESTING

The H-99 Series Needle Valve design have been tested for Proof and Burst. Every H-99 Needle Valve is factory tested with Nitrogen at 1000 psi (69 bar). The maximum allowable leakage across the seat is 0.1 std cc/min.

PACKING ADJUSTMENT

Due to the varied service applications of the valve, packing adjustment may be occasionally necessary.

Valve Packing is factory preadjusted to 1000 psig service.

Initial packing adjustment is recommended after installation and prior to start-up.

ALTERNATIVE STEMS

HAM-LET Needle Valves are available with a choice of stem-tip options to allow greater flexibility.

V- Stem: Standard stem tip used for the on/off operation in general-purpose liquids and gas service.

R- Regulating: Used where some degree of flow control is required.

NR- Non-Rotating: Typically used in high-cycle applications to extend valve life and prevent stem rotation inside the body tip, a suitable selection for gaseous high pressure applications.

Note: The maximum allowed working pressure that is marked on the valve may be limited according to the pressure limitations that are recommended by the tubing /piping standards (Reference: Let-Lok tube fittings General Information).

Note:

Valves with Let-Lok ends are always made of bar stock body. For lower temperature applications please contact your local representative.
