

**WAFER BUTTERFLY VALVE INITIAL RANGE
CAST IRON BODY WITH STAINLESS STEEL DISC AND NBR SEAT**

Certificate 3.1

Size : DN 32/40 to DN 300
Ends : Between flanges PN6,PN10/16,Class 150,JIS10K*
Min Temperature : -10°C
Max Temperature : + 80°C
Max Pressure : 16 Bars
Specifications : Long neck for isolation
Stainless steel disc
NBR vulcanized seat

Materials : Cast iron body

* according to DN

**WAFER BUTTERFLY VALVE INITIAL RANGE
CAST IRON BODY WITH STAINLESS STEEL DISC AND NBR SEAT**

SPECIFICATIONS :

- Long neck for isolation
- ISO 5211 mounting pad
- Wafer type
- Between flanges PN6 from DN40 to 150 and for DN300, PN10/16 from DN32 to 300, Class 150 (PN20) and JIS10K from DN40 to 300
- Full crossing stem
- With 10 positions lever and locking device up to DN150
- Double PTFE gasket on stem
- Stainless steel disc
- Epoxy painting RAL003 80 microns thickness
- Vulcanized NBR seat

USE :

- No aromatic hydrocarbon, fuel, water, natural gas, grease, oil, compressed air, glycol
- Min and max Temperature Ts : - 10°C to + 80°C
- Max Pressure Ps : 16 bars

FLOW COEFFICIENT Kv (M3 / h) :

| DN | 32/40 | 50 | 65 | 80 | 100 | 125 | 150 | 200 | 250 | 300 | |

TORQUE VALUE (Nm, without safety coefficient) :

We recommend a safety coefficient of 30% minimum to determinate the actuator.

STANDARDS :

- Fabrication according to ISO 9001 : 2015
- Designing according to API 609
- DIRECTIVE 2014/68/EU : CE N° 0035
Risk category III module H
- Certificate 3.1 on request
- Pressure tests according to API 598, table 6
- Length according to ISO 5752 series 20, EN 558 series 20 (NF 29305)
- ISO 5211 mounting pad
- Between flanges according to EN 1092-1 PN6-PN10/16 and ASME B16.5 Class 150 (PN20)

ADVICE : Our opinion and our advice are not guaranteed and SFERACO shall not be liable for the consequences of damages. The customer must check the right choice of the products with the real service conditions.

INSTALLATION INSTRUCTIONS

GENERAL GUIDELINES :

- Ensure that the valves to be used are appropriate for the conditions of the installation (type of fluid, pressure and temperature).
- Be sure to have enough valves to be able to isolate the sections of piping as well as the appropriate equipment for maintenance and repair.
- Ensure that the valves to be installed are of correct strength to be able to support the capacity of their usage.
- **Installation of all circuits should ensure that their function can be automatically tested on a regular basis (at least two times a year).**

**WAFER BUTTERFLY VALVE INITIAL RANGE
 CAST IRON BODY WITH STAINLESS STEEL DISC AND NBR SEAT**

INSTALLATION INSTRUCTIONS :

- **Before installing the valves, clean and remove any objects from the pipes** (in particular bits of sealing and metal) which could obstruct and block the valves.
- **Ensure that both connecting pipes either side of the valve (upstream and downstream) are aligned** (if they're not, the valves may not work correctly).
- **Make sure that the two sections of the pipe (upstream and downstream) match, the valve unit will not absorb any gaps. Any distortions in the pipes may affect the tightness of the connection, the working of the valve and can even cause a rupture.** To be sure, place the kit in position to ensure the assembling will work.
- **If sections of piping do not have their final support in place, they should be temporarily fixed. This is to avoid unnecessary strain on the valve.**
- The valve must be inserted between flanges with disc half opened but the disc must not overpass the valve thickness. Position the bolts to keep centered the valve. Then open fully the valve and tighten the bolts.
See graph under.

Half open valve introduction

Complete opened disc valves
 when screw tightening

- Tighten the bolts in cross.
- The disc must move easily inside the pipe.
- Valves must be opened during cleaning operation.
- Tests must be done with a cleaned pipe.
- Tests must be done with opened valve. Test pressure must not be higher than the valve specification according to API 598.
- Then open slowly the valve.
- **Do not mount butterfly valves with stainless steel pressed collars and turning flanges without strias.**
- **And not on flat face flanges without strias (example : painted cast iron fittings)**

MAINTENANCE :

- We recommend to operate fully the valve 1 to 2 times per year.
- During maintenance operation, ensure that the pipe isn't under pressure, that there's no fluid in the pipe and that the valve is isolated. If there's a fluid in the pipe, evacuate it. Ensure that there are no risks due to the temperature or the fluid (like acids). If the fluid is corrosive, inert the installation before maintenance operation.
